PSpice folder contains PSpice 9.1 student version and PSpice-based examples and the associated library files. If you plan to use PSpice, please perform the following steps in the sequence indicated (this sequence is important):

1. Double-click on the Install_PSpice_9.1 folder. Double-click on Setup.exe to start PSpice installation. Make sure to choose Schematics (NOT Capture) in the screen titled "Select Schematic Editors" and default settings on the following screens.

2. Double-click on FirstCourse_PE_Book2003_PSpiceExamples folder. Double click on Setup.exe to install the examples and the library files using all default settings.

See the Lecture_Presentation_Slides for the file names of various PSpice examples.
